The Future Fund Long/Short ETF (the "Fund") is a separate series of Northern Lights Fund Trust II (the "Trust"), a registered management investment company.

The Fund lists and principally trades its shares on NYSE Arca, Inc., a national securities exchange, and trades at market prices. Market prices may differ to some degree from the net asset value of the shares. Unlike mutual funds, the Fund issues and redeems shares at net asset value, only in large blocks of shares called "*Creation Units*."

Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

This Prospectus provides important information about the Fund that you should know before investing. Please read it carefully and keep it for future reference.

The U.S. Securities and Exchange Commission ("SEC") has not approved or disapproved of these securities or determined if this Prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The Future Fund Long/Short ETF

a series of the Northern Lights Fund Trust II (the "Trust")

Summary Section – The Future Fund Long/Short ETF

Investment Objective. The investment objective of the Future Fund Long/Short ETF (the “Fund”) is to seek to provide capital appreciation.

Fees and Expenses of the Fund. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	1.00%
Other Expenses ⁽¹⁾	0.89%
Dividends on Securities Sold Short ⁽²⁾	0.50%
Acquired Fund Fees and Expenses ⁽³⁾	0.01%
Total Annual Fund Operating Expenses	2.40%
Fee Waiver and Expense Reimbursements ⁽⁴⁾	(0.65%)
Total Annual Fund Operating Expenses after Fee Waiver and Expense Reimbursements	1.75%

(1) Estimated for the current fiscal year.

(2) This number represents an estimate for the Fund's current fiscal year. There are additional costs associated with the use of short sales. Short-sale dividends generally reduce the market value of the securities by the amount of the dividend declared; thus increasing the Fund's unrealized gain or reducing the Fund's unrealized loss on the securities sold short.

(3) This number represents the combined total fees and operating expenses of the Acquired Funds owned by the Fund and is not a direct expense incurred by the Fund or deducted from the Fund assets, however it is an indirect cost of investing in the Fund.

(4) Pursuant to an operating expense limitation agreement between The Future Fund, LLC (the “Adviser”) and the Trust, on behalf of the Fund, the Adviser has agreed to waive its fees and/or absorb expenses of the Fund to ensure that Total Annual Fund Operating Expenses for the Fund (excluding any front-end or contingent deferred loads, brokerage fees and commissions, acquired fund fees and expenses, borrowing costs (such as interest and dividend expense on securities sold short) and extraordinary expenses do not exceed 1.24% of the Fund's average net assets through September 30, 2024. This operating expense limitation agreement can be terminated only by, or with the consent of, the Board of Trustees of the Trust. The Adviser is permitted to receive reimbursement from the Fund for fees it waived and Fund expenses it paid, subject to the limitation that (1) the reimbursement for fees and expenses will be made only if payable within three years from the date the fees and expenses were initially waived or reimbursed and (2) the reimbursement may not be made if it would cause the expense limitation in effect at the time of the waiver or currently in effect, whichever is lower, to be exceeded.

Example. This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The fee waiver/expense reimbursement arrangement discussed in the table above is reflected only through September 30, 2024. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

One Year	Three Years
\$178	\$686

Portfolio Turnover. The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. The Fund has only recently commenced operations.

Principal Investment Strategies. Under normal conditions, the Fund, which is an actively managed exchange traded fund or “ETF”, will invest at least 80% of its assets in long and short positions in U.S. exchange-listed equity securities and American Depositary Receipts (ADRs). The Fund may invest in the equity securities of companies of any market capitalization although the Fund will primarily invest (at least 65% of its assets) in mid and large capitalization companies (companies with market capitalizations in excess of \$2 billion). The equity securities in which the Fund may invest include common stock, preferred stock and convertible securities. ADRs are issued by a U.S. financial institution (depository) and evidence ownership in a security or pool of securities issued by a foreign issuer that have been deposited with the depository. The Fund may invest in foreign securities listed on foreign exchanges. The Fund’s investments in foreign equity securities will be in both developed and emerging markets (emerging markets are those countries that have an emerging stock market as defined by MSCI, countries or markets with low- to middle-income economies as classified by the World Bank, and other countries or markets with similar emerging characteristics).

The Fund’s portfolio is composed of both long and short positions in equity securities. A long position arises where the Fund holds a security in its portfolio or maintains a position through a derivative instrument that provides economic exposure similar to

direct ownership of the security. Short positions generally involve selling a security not held within the portfolio in anticipation that the security's price will decline or entering into a derivative instrument that provides economic exposure similar to a short sale of the security. To complete a short sale transaction, the Fund typically must borrow the stock to make delivery to the buyer. The Fund then would be obligated to replace the stock borrowed by purchasing the stock at the market price at the time of replacement. The price at such time may be higher or lower than the price at which the stock was sold short by the Fund. The Fund will be managed with a net long exposure bias (i.e., more long positions than short positions), but has the ability to have net short exposure (i.e., when the percentage of short positions is higher than long positions). The Fund may hold a substantial portion of its total assets in cash when it holds significant short positions.

The Fund will take long positions in the equity securities of companies that the Adviser believes to be best positioned to take advantage of or profit from emerging technological or social trends or developments. As part of the investment process, the Adviser seeks to identify investment opportunities created by changes in technology, consumer preferences, demographics, regulatory, environmental and the supply and demand for products and services that unfold over long periods of time (i.e., multiple years) ("secular trends") and the companies that can significantly benefit and profit from such trends. Through a proprietary research driven process, the Adviser then analyzes those companies across sectors and secular trends, also known as "themes" (e.g., green energy, online shopping or cybersecurity) to try to identify for investment those companies it believes to be "thematic winners" (companies that the Adviser believes can benefit from positive secular trends or "themes") with reasonable valuations. The Adviser will take short positions in, or purchase put options on, the securities of companies it believes to be "thematic losers" (companies that the Adviser believes will be negatively affected by emerging secular trends or "themes") or that have a combination of weakening fundamentals and excessive valuation.

The Fund's long-short exposure will vary over time based on the Adviser's assessments of market conditions and other factors. The Adviser may increase the Fund's short equity exposure when it believes that market conditions are particularly favorable for a short strategy, such as during periods of modest gains and moderate volatility in the equity markets, or when the market is considered to be overvalued. The Fund's net long exposure may exceed 100% of the Fund's net assets. The Adviser may alter the size of the short positions and/or the risk profile of the short positions

based upon its assessment of the equity markets. Additionally, the notional position of the short positions may be reduced significantly or eliminated temporarily.

The Fund may also maintain long and short positions through the use of derivative instruments, including swap agreements, options, futures, and forward contracts, without investing directly in the underlying asset. The Fund may use derivative instruments to attempt to both increase the return of the Fund and hedge (protect) the value of the Fund's assets. Investments in derivative instruments may have the economic effect of creating financial leverage in the Fund's portfolio because such investments may give rise to exposures that exceed the Fund's total assets and may result in losses that exceed the amount the Fund invested. Financial leverage will magnify, sometimes significantly, the Fund's exposure to any increase or decrease in prices associated with a particular reference asset resulting in increased volatility in the value of the Fund's portfolio.

The Fund also employs short positions in equity securities for hedging purposes.

The Fund will also use exchange-traded-funds ("ETFs") to adjust market exposure or manage cash needs.

The Adviser anticipates using a long-term approach to investing that typically results in low to moderate portfolio turnover. The Adviser, however, may increase portfolio turnover, depending upon market conditions.

The Fund is classified as a "non-diversified" investment company under the Investment Company Act of 1940, as amended (the "1940 Act"), which means that it may invest a high percentage of its assets in a limited number of issuers.

Principal Risks. Remember that in addition to possibly not achieving your investment goals, you could lose money by investing in the Fund. If the Adviser's strategies do not work as intended, the Fund may not achieve its objective. The principal risks of investing in the Fund are:

- **Active Management Risk.** The Fund is an actively managed ETF. The Adviser's judgments about the growth, value or potential appreciation of an investment may prove to be incorrect or fail to have the intended results, which could adversely impact the Fund's performance and cause it to underperform relative to other funds with similar investment goals or relative to its benchmark, or not to achieve its investment goal.

- **Authorized Participant Risk.** Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for ETFs that invest in non-U.S. securities or other securities or instruments that have lower trading volumes.
- **Company-Specific Risk.** The possibility that a particular stock may lose value due to factors specific to the company itself, including deterioration of its fundamental characteristics, an occurrence of adverse events at the company, or a downturn in its business prospects.
- **Convertible Securities Risk.** The market value of a convertible security performs like that of a regular debt security; that is, if market interest rates rise, the value of a convertible security usually falls. In addition, convertible securities are subject to the risk that the issuer will not be able to pay interest or dividends when due, and their market value may change based on changes in the issuer's credit rating or the market's perception of the issuer's creditworthiness. Since it derives a portion of its value from the common stock into which it may be converted, a convertible security is also subject to the same types of market and issuer risks that apply to the underlying common stock.
- **Depository Receipts Risk.** Investment in depository receipts does not eliminate all the risks inherent in investing in securities of non-U.S. issuers. The market value of depository receipts is dependent upon the market value of the underlying securities and fluctuations in the relative value of the currencies in which the depository receipts and the underlying securities are quoted.
- **Derivatives Risk.** The Fund uses investment techniques, including investments in swaps, futures contracts and options, which may be considered aggressive (i.e., with a higher risk of loss). Using derivatives exposes the Fund to additional or heightened risks, including leverage risk, liquidity risk, valuation risk, market risk, counterparty risk, and credit risk. Derivatives transactions can be highly illiquid and difficult to unwind or value, they can increase Fund volatility, and changes in the value of a derivative held by the Fund may not correlate with the value of the underlying instrument or the

Fund's other investments. Many of the risks applicable to trading the instruments underlying derivatives are also applicable to derivatives trading. However, derivatives are subject to additional risks such as operational risk, including settlement issues, and legal risk, including that underlying documentation is incomplete or ambiguous. For derivatives that are required to be cleared by a regulated clearinghouse, other risks may arise from the Fund's relationship with a brokerage firm through which it submits derivatives trades for clearing, including in some cases from other clearing customers of the brokerage firm. In addition, the Fund's investments in derivatives are currently subject to the following risks:

- **Futures Contracts.** Futures contracts are standardized, exchange-traded contracts that obligate a purchaser to take delivery, and a seller to make delivery, of a specific amount of an asset at a specified future date at a specified price. The primary risks associated with the use of futures contracts and options are: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract or option; (b) the possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the investment adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; and (e) the possibility that the counterparty will default in the performance of its obligations.
- **Hedging Risk.** When a derivative is used as a hedge against a position that the Fund holds, any loss generated by the derivative generally should be substantially offset by gains on the hedged investment, and vice versa. While hedging can reduce or eliminate losses, it can also reduce or eliminate gains. Hedges are sometimes subject to imperfect matching between the derivative and the underlying security, and there can be no assurance that the Fund's hedging transactions will be effective.
- **Options.** An option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a "call option") or sell (a "put option") the underlying asset (or settle for cash in an amount based on an underlying asset, rate, or index) at a specified price (the "exercise price") during a period of time or on a specified date. Investments in options are considered speculative. When the Fund purchases an option, it may lose the total

premium paid for it if the price of the underlying security or other assets decreased, remained the same or failed to increase to a level at or beyond the exercise price (in the case of a call option) or increased, remained the same or failed to decrease to a level at or below the exercise price (in the case of a put option). If a put or call option purchased by the Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund. To the extent that the Fund writes or sells an option, if the decline or increase in the underlying asset is significantly below or above the exercise price of the written option, the Fund could experience a substantial loss.

- **Swaps.** The Fund may enter into swap transactions. Swap agreements, including total return swaps that may be referred to as contracts for difference, are two-party contracts entered into for periods ranging from a few weeks to more than one year. In a standard “swap” transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which can be adjusted for an interest factor. Swap agreements involve the risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements may also involve the risk that there is an imperfect correlation between the return on the Fund’s obligation to its counterparty and the return on the referenced asset. In addition, swap agreements are subject to market and illiquidity risk, leverage risk and hedging risk.
- **Early Close/Trading Halt Risk.** An exchange or market may close or impose a market trading halt or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.
- **Emerging Markets Risk.** Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging securities markets have far lower trading volumes and less liquidity than developed markets.

- **Equity Securities Risk.** Fluctuations in the value of equity securities held by the Fund will cause the net asset value (“NAV”) of the Fund and the price of its shares (“Shares”) to fluctuate. Common stock of an issuer in the Fund’s portfolio may decline in price if the issuer fails to make anticipated dividend payments. Common stock will be subject to greater dividend risk than preferred stocks or debt instruments of the same issuer. In addition, common stocks have experienced significantly more volatility in returns than other asset classes.
- **ETF Structure Risk.** The Fund is structured as an ETF and as a result is subject to the special risks, including:
 - **Not Individually Redeemable.** Shares are not individually redeemable to retail investors and may be redeemed only by the ETF only to Authorized Participants at NAV in large blocks known as “Creation Units.” An Authorized Participant may incur brokerage costs purchasing enough Shares to constitute a Creation Unit.
 - **Trading Issues.** An active trading market for the Shares may not be developed or maintained. Trading in Shares on NYSE Arca (the “Exchange”) may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange, which may result in the trading of the Shares being suspended or the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
 - **Market Price Variance Risk.** The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security.
 - In times of market stress, market makers may step away from their role market making in the Shares of ETFs and in executing trades, which can lead to differences between the market value of Shares and an ETF’s NAV.
 - The market price of the Shares may deviate from an ETF’s NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for

Shares than an ETF's NAV, which is reflected in the bid and ask price for Shares or in the closing price.

- When all or a portion of an ETF's underlying securities trade in a market that is closed when the market for the Shares is open, there may be changes from the last quote of the closed market and the quote from an ETF's domestic trading day, which could lead to differences between the market value of the Shares and an ETF's NAV.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of an ETF's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and an ETF's NAV.
- **Foreign Securities Risk.** Foreign markets, particularly emerging markets, can be more volatile than the U.S. market due to increased risks of adverse issuer, political, regulatory, market, or economic developments and can perform differently from the U.S. market. Emerging markets can be subject to greater social, economic, regulatory, and political uncertainties and can be extremely volatile. Foreign exchange rates also can be extremely volatile.
 - **Investing in Other ETFs Risk.** The Fund bears all risks of investment strategies employed by the ETFs ("underlying funds") that it may invest in, including the risk that the underlying funds will not meet their investment objectives. ETFs may trade in the secondary market at prices below the value of their underlying portfolios and may not be liquid. ETFs that track an index are subject to tracking error and may be unable to sell poorly performing assets that are included in their index or other benchmark.
 - **Issuer Risk.** The performance of the Fund depends on the performance of individual securities to which the Fund has exposure. Changes in the financial condition or credit rating of an issuer of those securities may cause the value of the securities to decline.
 - **Large Capitalization Company Risk.** The value of investments in larger companies may not rise as much as smaller companies, or larger companies may be unable to respond quickly to competitive challenges, such as changes in technology and consumer tastes.
 - **Leverage Risk.** If the Fund uses leverage through activities such as borrowing, entering into short sales, purchasing securities on margin or on a "when issued" basis or purchasing derivative instruments in an effort to increase its returns, the Fund has the risk of magnified capital losses that occur when

losses affect an asset base, enlarged by borrowings or the creation of liabilities, that exceeds the net assets of the Fund. Should the Fund employ leverage, the Fund's NAV may be more volatile and sensitive to market movements. Leverage may involve the creation of a liability that requires the Fund to pay interest.

- **Limited History of Operations Risk.** The Fund is a new ETF with a limited history of operations for investors to evaluate.
- **Market Risk.** The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different region or financial market. Securities in the Fund's portfolio may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on the U.S. financial market. The current novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on the U.S. financial market. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your Fund investment.
- **Mid Cap Securities Risk.** The securities of mid cap companies generally trade in lower volumes and are generally subject to greater and less predictable price changes than the securities of larger capitalization companies.
- **Non-Diversified Risk.** The Fund is classified as a "non-diversified" investment company under the 1940 Act. Therefore, the Fund may invest a relatively higher percentage of its assets in a relatively smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.
- **Short Sales Risk.** A short sale involves the sale of a security that the Fund does not own in the expectation of purchasing the same security (or a security exchangeable therefore) at a later date at a lower price. Short sales expose the

Fund to the risk that it will be required to buy the security sold short (also known as “covering” the short position) at a time when the security has appreciated in value, thus resulting in a loss to the Fund. Investment in short sales may also cause the Fund to incur expenses related to borrowing securities. Reinvesting proceeds received from short selling may create leverage which can amplify the effects of market volatility on the Fund and, therefore, the Fund’s share prices. Theoretically, uncovered short sales have the potential to expose the Fund to unlimited losses..

- **Small Cap and Emerging Growth Securities Risk.** Small cap or emerging growth companies may have limited product lines or markets. They may be less financially secure than larger, more established companies. They may depend on a more limited management group than larger capitalized companies.

Performance. Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of the Prospectus. Also, shareholder reports containing financial and performance information will be mailed to shareholders semi-annually. Updated performance information will be available at no cost by www.futurefundetf.com or by calling 877-466-7090. In the future, performance information will be presented in this section of the Prospectus.

Investment Adviser. The Future Fund, LLC serves as the Fund’s investment adviser.

Portfolio Managers. The following individuals serve as the Fund’s portfolio managers:

Portfolio Managers	Primary Title	With the Fund since
Gary Black	Managing Partner, The Future Fund, LLC	January 2022
David Kalis	Partner, The Future Fund, LLC	January 2022

Purchase and Sale of Fund Shares. The Fund issues and redeems Shares on a continuous basis at NAV only in large blocks of Shares called “Creation Units”. Individual Shares of the Fund may only be purchased and sold in secondary market transactions through a broker dealer. Because Shares are listed for trading on the Exchange and trade at market prices rather than NAV. Shares may trade at a price that is greater than, at, or less than, NAV. Investors may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares

of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”). Recent information, including the Fund’s net asset value, premiums and discounts, and bid-ask spreads, is available online at <http://www.futurefundetf.com>.

Tax Information. The Fund’s distributions generally will be taxable as ordinary income or long-term capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries. If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create conflicts of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

Additional Information About Principal Investment Strategies and Related Risks

Investment Objective

The investment objective of the Fund is to seek to provide capital appreciation.

The Fund's investment objective is non-fundamental and may be changed by the Board of Trustees upon 60 days' written notice to shareholders.

Principal Investment Strategies

Under normal conditions, the Fund, which is an actively managed exchange traded fund or "ETF", will invest at least 80% of its assets in long and short positions in U.S. exchange-listed equity securities and American Depositary Receipts (ADRs). The Fund may invest in the equity securities of companies of any market capitalization although the Fund will primarily invest (at least 65% of its assets) in mid and large capitalization companies (companies with market capitalizations in excess of \$2 billion). The equity securities in which the Fund may invest include common stock, preferred stock and convertible securities. ADRs are issued by a U.S. financial institution (depository) and evidence ownership in a security or pool of securities issued by a foreign issuer that have been deposited with the depository. The Fund may invest in foreign securities listed on foreign exchanges. The Fund's investments in foreign equity securities will be in both developed and emerging markets (emerging markets are those countries that have an emerging stock market as defined by MSCI, countries or markets with low- to middle-income economies as classified by the World Bank, and other countries or markets with similar emerging characteristics).

The Fund's portfolio is composed of both long and short positions in equity securities. A long position arises where the Fund holds a security in its portfolio or maintains a position through a derivative instrument that provides economic exposure similar to direct ownership of the security. Short positions generally involve selling a security not held within the portfolio in anticipation that the security's price will decline or entering into a derivative instrument that provides economic exposure similar to a short sale of the security. To complete a short sale transaction, the Fund typically must borrow the stock to make delivery to the buyer. The Fund then would be obligated to replace the stock borrowed by purchasing the stock at the market price at the time of replacement. The price at such time may be higher or lower than the price at which the stock was sold short by the Fund. The Fund will be managed with

a net long exposure bias (i.e., more long positions than short positions), but has the ability to have net short exposure (i.e., when the percentage of short positions is higher than long positions). The Fund may hold a substantial portion of its total assets in cash when it holds significant short positions.

The Fund will take long positions in the equity securities of companies that the Adviser believes to be best positioned to take advantage of or profit from emerging technological or social trends or developments. As part of the investment process, the Adviser seeks to identify investment opportunities created by changes in technology, consumer preferences, demographics, regulatory, environmental and the supply and demand for products and services that unfold over long periods of time (i.e., multiple years) (“secular trends”) and the companies that can significantly benefit and profit from such trends. Through a proprietary research driven process, the Adviser then analyzes those companies across sectors and secular trends, also known as “themes” (e.g., green energy, online shopping or cybersecurity), to try to identify for investment those companies it believes to be “thematic winners” (companies that the Adviser believes can benefit from positive secular trends or “themes”) with reasonable valuations. The Adviser will take short positions in, or purchase put options on, the securities of companies it believes to be “thematic losers” (companies that the Adviser believes will be negatively affected by emerging secular trends or “themes”) or that have a combination of weakening fundamentals and excessive valuation.

The Fund’s long-short exposure will vary over time based on the Adviser’s assessments of market conditions and other factors. The Adviser may increase the Fund’s short equity exposure when it believes that market conditions are particularly favorable for a short strategy, such as during periods of modest gains and moderate volatility in the equity markets, or when the market is considered to be overvalued. The Fund’s net long exposure may exceed 100% of the Fund’s net assets. The Adviser may alter the size of the short positions and/or the risk profile of the short positions based upon its assessment of the equity markets. Additionally, the notional position of the short positions may be reduced significantly or eliminated temporarily.

The Fund may also maintain long and short positions through the use of derivative instruments, including swap agreements, options, futures, and forward contracts, without investing directly in the underlying asset. The Fund may use derivative instruments to attempt to both increase the return of the Fund and hedge (protect) the value of the Fund’s assets. Investments in derivative instruments may have the economic effect of creating financial leverage in the Fund’s portfolio because such

investments may give rise to exposures that exceed the Fund's total assets and may result in losses that exceed the amount the Fund invested. Financial leverage will magnify, sometimes significantly, the Fund's exposure to any increase or decrease in prices associated with a particular reference asset resulting in increased volatility in the value of the Fund's portfolio.

The Fund also employs short positions in equity securities for hedging purposes.

The Fund will also use exchange-traded-funds ("ETFs") to adjust market exposure or manage cash needs.

The Adviser anticipates using a long-term approach to investing that typically results in low to moderate portfolio turnover. The Adviser, however, may increase portfolio turnover, depending upon market conditions.

The Fund is classified as a "non-diversified" investment company under the Investment Company Act of 1940, as amended (the "1940 Act"), which means that it may invest a high percentage of its assets in a limited number of issuers.

General Investment Policies for Fund

Temporary or Cash Investments. Under normal market conditions, the Fund will stay fully invested according to its principal investment strategies as noted above. The Fund, however, may temporarily depart from its principal investment strategies by making short-term investments in cash, cash equivalents, and high-quality, short-term debt securities and money market instruments for temporary defensive purposes in response to adverse market, economic or political conditions, or other events (including, for example, terrorism, war, natural disasters and disease/virus epidemics). This may result in the Fund not achieving its investment objectives during that period.

For longer periods of time, the Fund may hold a substantial cash position. If the market advances during periods when the Fund is holding a large cash position, the Fund may not participate to the extent it would have if the Fund had been more fully invested. To the extent that the Fund uses a money market fund for its cash position, there will be some duplication of expenses because the Fund would bear its pro rata portion of such money market fund's advisory fees and operational expenses.

Securities Lending. To generate additional income, the Fund may lend its portfolio securities to qualified banks, broker-dealers and financial institutions (referred to as “borrowers”), provided that: (i) the loan is continuously secured by collateral in cash, cash equivalents, bank letters of credit or U.S. Government securities equal to at least 100% of the value of the loaned securities, and such collateral must be valued, or “marked to market,” daily (borrowers are required to furnish additional collateral to the Fund as necessary to fully cover its obligations); (ii) the loan may be recalled at any time by the Fund and the loaned securities be returned; (iii) the Fund will receive any interest, dividends or other distributions paid on the loaned securities; and (iv) the aggregate value of the loaned securities will not exceed 33 ¹/₃% of the Fund’s total assets. The Fund generally retains part or all of the interest received on investment of the cash collateral or receives a fee from the borrower. While this practice will not impact the Fund’s principal investment strategy, it does subject the Fund to the securities lending risk described in this Prospectus.

Loans of securities involve a risk that the borrower may fail to return the securities or may fail to maintain the proper amount of collateral, which may result in a loss of money by the Fund or a delay in recovering the loaned securities. In addition, in the event of bankruptcy of the borrower, the Fund could experience delays in recovering the loaned securities or only recover cash or a security of equivalent value. Therefore, the Fund will only enter into portfolio loans after a review of all pertinent factors by the Adviser under the supervision of the Board, including the creditworthiness of the borrower and then only if the consideration to be received from such loans would justify the risk. Creditworthiness will be monitored on an ongoing basis by the Adviser. The Board of Trustees has a fiduciary obligation to recall a loan in time to vote proxies if fund management has knowledge of a material vote respect to the loaned securities and the Fund will attempt to recall a loaned security to permit the exercise of voting or consent rights if the matter involved would have a material effect on the Fund’s investment in the security. The costs of securities lending are not reflected in the “Annual Fund Operating Expenses” table or “Expense Example” above.

Principal Risks of Investing in the Fund

Before investing in the Fund, you should carefully consider your own investment goals, the amount of time you are willing to leave your money invested and the amount of risk you are willing to take. **Remember that in addition to possibly not achieving your investment goals, you could lose money by investing in the Fund.** The value of your investment in the Fund will go up and down with the prices

of the securities in which the Fund invests. The following table below describes these risks born by the Fund with respect to its investments:

Active Management Risk. The Fund is an actively managed ETF. The Adviser's judgments about the growth, value or potential appreciation of an investment may prove to be incorrect or fail to have the intended results, which could adversely impact the Fund's performance and cause it to underperform relative to other funds with similar investment goals or relative to its benchmark, or not to achieve its investment goal.

Authorized Participant Risk. Only an authorized participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as authorized participants on an agency basis (i.e., on behalf of other market participants). To the extent that authorized participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other authorized participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting.

Company-Specific Risk. The possibility that a particular stock may lose value due to factors specific to the company itself, including deterioration of its fundamental characteristics, an occurrence of adverse events at the company, or a downturn in its business prospects.

Convertible Securities Risk. The market value of a convertible security performs like that of a regular debt security; that is, if market interest rates rise, the value of a convertible security usually falls. In addition, convertible securities are subject to the risk that the issuer will not be able to pay interest or dividends when due, and their market value may change based on changes in the issuer's credit rating or the market's perception of the issuer's creditworthiness. Since it derives a portion of its value from the common stock into which it may be converted, a convertible security is also subject to the same types of market and issuer risks that apply to the underlying common stock.

Depository Receipts Risk. ADRs and GDRs are securities typically issued by a bank or trust company that evidence ownership of underlying securities issued by a foreign corporation and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign securities. The issuers of certain depository receipts are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to

the deposited securities. Investment in depositary receipts may be less liquid than the underlying shares in their primary trading market. Depositary receipts may not necessarily be denominated in the same currency as the underlying securities into which they may be converted. In addition, the issuers of the stock underlying unsponsored depositary receipts are not obligated to disclose material information in the United States. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market.

Derivatives Risk. The Fund uses investment techniques, including investments in swaps, futures contracts, and options, which may be considered aggressive (*i.e.*, with a higher risk of loss). Using derivatives exposes the Fund to additional or heightened risks, including leverage risk, liquidity risk, valuation risk, market risk, counterparty risk, and credit risk. A small investment in derivatives could have a potentially large impact on the Fund's performance. Derivatives transactions can be highly illiquid and difficult to unwind or value, they can increase Fund volatility, and changes in the value of a derivative held by the Fund may not correlate with the value of the underlying instrument or the Fund's other investments. Many of the risks applicable to trading the instruments underlying derivatives are also applicable to derivatives trading. However, derivatives are subject to additional risks such as operational risk (such as documentation issues and settlement issues) and legal risk (such as insufficient documentation, insufficient capacity or authority of a counterparty, and issues with the legality or enforceability of a contract). For derivatives that are required to be cleared by a regulated clearinghouse, other risks may arise from a Fund's relationship with a brokerage firm through which it submits derivatives trades for clearing, including in some cases from other clearing customers of the brokerage firm. The Fund would also be exposed to counterparty risk with respect to the clearinghouse. Financial reform laws have changed many aspects of financial regulation applicable to derivatives. Once implemented, new regulations, including margin, clearing, and trade execution requirements, may make derivatives more costly, may limit their availability, may present different risks or may otherwise adversely affect the value or performance of these instruments. The extent and impact of these regulations are not yet fully known and may not be known for some time. Certain risks relating to various types of derivatives in which the Fund may invest are described below.:

- *Futures Contracts.* Futures contracts are standardized, exchange-traded contracts that obligate a purchaser to take delivery, and a seller to make delivery, of a specific amount of an asset at a specified future date at a specified price. The primary risks associated with the use of futures contracts

and options are: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract or option; (b) the possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the investment adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; and (e) the possibility that the counterparty will default in the performance of its obligations.

- *Hedging Transactions.* The Fund may employ hedging techniques that involve a variety of derivative transactions, including futures contracts, swaps, and exchange-listed and over-the-counter put and call options on securities or on financial indices (collectively, "Hedging Instruments"). Hedging techniques involve risks different than those of underlying investments. In particular, the variable degree of correlation between price movements of Hedging Instruments and price movements in the position being hedged means that losses on the hedge may be greater than gains in the value of the Fund's positions, or that there may be losses on both parts of a transaction. In addition, certain Hedging Instruments and markets may not be liquid in all circumstances. As a result, in volatile markets, the Fund may not be able to close out a transaction in certain of these instruments without incurring losses. The Adviser may use Hedging Instruments to minimize the risk of total loss to the Fund by offsetting an investment in one security with a comparable investment in a contrasting security. However, such use may limit any potential gain that might result from an increase in the value of the hedged position. Whether the Fund hedges successfully will depend on the Adviser's ability to predict pertinent market movements. The daily variation margin requirements in futures contracts might create greater financial risk than would options transactions, where the exposure is limited to the cost of the initial premium and transaction costs paid by a Fund.

Options. The Fund may invest in options that trade on either an exchange or over-the-counter. By buying a call option on a security, the Fund has the right, in return for the premium paid, to buy the security or commodity underlying the option at the exercise price. By writing (selling) a call option and receiving a premium, the Fund becomes obligated, during the term of the option, to deliver the security or commodity underlying the option at the exercise price if the option is exercised. By buying a put option, the Fund has the right, in return for the premium, to sell the security or commodity underlying the

option at the exercise price. By writing a put option and receiving a premium, the Fund becomes obligated during the term of the option to purchase the security or commodity underlying the option at the exercise price. An option on an index gives the holder the right to receive an amount of cash upon exercise of the option equal to the difference between the closing value of the index and the exercise price of the option. Receipt of this cash amount will depend upon the closing level of the index upon which the option is based being greater than (in the case of a call) or less than (in the case of put) the exercise price of the option. Some stock index options are based on a market index such as the S&P 500 Index. When the Fund purchases an option on a futures contract, it acquires the right in return for the premium it pays to assume a position in a futures contract (a long position if the option is a call and a short position if the option is a put) rather than to purchase or sell stock, at a specified exercise price at any time during the period of the option. When the Fund writes an option on a futures contract, it becomes obligated, in return for the premium received, to assume a position in the futures contract (a short position if the option is a call, a long position if the option is a put) at a specified exercise price at any time during the term of the option. If the Fund writes a call, it assumes a short futures position. If the Fund writes a put, it assumes a long futures position. Upon exercise of the option, the delivery of the futures position to the purchaser of the option will be accompanied by transfer to the purchaser of an accumulated balance representing the amount by which the market price of the futures contract exceeds, in the case of a call, or is less than, in the case of a put, the exercise price of the option on the future.

- *Options on Futures Contracts.* An option on a futures contract provides the holder with the right to enter into a "long" position in the underlying futures contract, in the case of a call option, or a "short" position in the underlying futures contract in the case of a put option, at a fixed exercise price to a stated expiration date. Upon exercise of the option by the holder, the contract market clearing house establishes a corresponding short position for the writer of the option, in the case of a call option, or a corresponding long position, in the case of a put option.

Swaps. The Fund may enter into swap transactions. Swap agreements, including total return swaps that may be referred to as contracts for difference, are two-party contracts entered into for periods ranging from a few weeks to more than one year. In a standard "swap" transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which can

be adjusted for an interest factor. Swap agreements involve the risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements may also involve the risk that there is an imperfect correlation between the return on the Fund's obligation to its counterparty and the return on the referenced asset. In addition, swap agreements are subject to market and illiquidity risk, leverage risk and hedging risk. The income tax treatment of swap agreements is unsettled and may be subject to future legislation, regulation or administrative pronouncements issued by the IRS. If future guidance limits the Fund's ability to use derivatives, the Fund may have to find other ways of achieving its investment objective.

Early Close/Trading Halt Risk. An exchange or market may close or impose a market trading halt or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

Emerging Markets Risk. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging securities markets have far lower trading volumes and less liquidity than developed markets.

Equity Securities Risk. Fluctuations in the value of equity securities held by the Fund will cause the net asset value ("NAV") of the Fund and the price of its shares ("Shares") to fluctuate.

- *Common Stock Risk.* Common stock of an issuer in the Fund's portfolio may decline in price if the issuer fails to make anticipated dividend payments. Common stock will be subject to greater dividend risk than preferred stocks or debt instruments of the same issuer. In addition, common stocks have experienced significantly more volatility in returns than other asset classes.
- *Preferred Stock Risk.* Generally, preferred stockholders have no voting rights with respect to the issuing company unless certain events occur. In addition, preferred stock will be subject to greater credit risk than debt instruments of

an issuer, and could be subject to interest rate risk like fixed income securities, as described below. An issuer's board of directors is generally not under any obligation to pay a dividend (even if dividends have accrued), and may suspend payment of dividends on preferred stock at any time. There is also a risk that the issuer of any of the Fund's holdings will default and fail to make scheduled dividend payments on the preferred stock held by the Fund).

ETF Structure Risk. The Fund is structured as an ETF and as a result is subject to the special risks, including:

- *Not Individually Redeemable.* Shares are not redeemable by retail investors and may be redeemed only by authorized participants at NAV and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange, which may result in the trading of the Shares being suspended or the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Shares and lead to a difference in the market price of the Shares and their underlying value.
- *Market Price Variance Risk.* Individual Shares of the Fund that are listed for trading on the Exchange can be bought and sold in the secondary market at market prices. The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares. There may be times when the market price and the NAV vary significantly and you may pay more than NAV when buying Shares on the secondary market, and you may receive less than NAV when you sell those Shares. The market price of Shares, like the price of any exchange traded security, includes a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that Shares may trade at a discount to NAV and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Fund's investment results are measured based upon the daily NAV of the Fund over a period of time. Investors purchasing and selling Shares in the

secondary market may not experience investment results consistent with those experienced by those authorized participants creating and redeeming directly with the Fund.

- o In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Shares and the Fund's NAV.
- o The market price for the Shares may deviate from the Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Shares than the Fund's NAV, which is reflected in the bid and ask price for Fund shares or in the closing price.

- o When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Shares and the Fund's NAV.
- o In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and the Fund's NAV.

Foreign Securities Risk. Foreign securities, foreign currencies, and securities issued by U.S. entities with substantial foreign operations, and securities for which an entity located in a foreign country provides credit support or a maturity-shortening structure can involve additional risks relating to political, economic, or regulatory conditions in foreign countries. These risks include fluctuations in foreign exchange rates; withholding or other taxes; trading, settlement, custodial, and other operational risks; and the less stringent investor protection and disclosure standards of some foreign markets. All of these factors can make foreign investments, especially those in emerging markets, more volatile and potentially less liquid than U.S. investments. In addition, foreign markets can perform differently from the U.S. market.

Investing in emerging markets can involve risks in addition to and greater than those generally associated with investing in more developed foreign markets. The extent of economic development; political stability; market depth, infrastructure, and capitalization; and regulatory oversight can be less than in more developed markets.

Emerging market economies can be subject to greater social, economic, regulatory, and political uncertainties. All of these factors can make emerging market securities more volatile and potentially less liquid than securities issued in more developed markets.

Global economies and financial markets are becoming increasingly interconnected, which increases the possibilities that conditions in one country or region might adversely impact issuers or providers in, or foreign exchange rates with, a different country or region.

Investing in Other ETFs. The Fund bears all risks of investment strategies employed by ETFs that it invests in ("underlying funds"). The Fund does not control the investments of the underlying funds, which may have different investment objectives and may engage in investment strategies that the Fund would not engage in directly. Aggregation of underlying fund holdings may result in indirect concentration of assets in a particular industry or group of industries, or in a single issuer, which may increase volatility. Additionally, ETFs may trade in the secondary market (e.g., on a stock exchange) at prices below the value of their underlying portfolios and may not be liquid. An ETF that is not actively managed cannot sell poorly performing stocks or other assets as long as they are represented in its index or other benchmark. ETFs that track an index are subject to tracking error risk (the risk of errors in matching the ETF's underlying assets to its index or other benchmark).

Issuer Risk. The performance of the Fund depends on the performance of individual securities to which the Fund has exposure. Changes in the financial condition or credit rating of an issuer of those securities may cause the value of the securities to decline.

Large Capitalization Companies Risk: The value of investments in larger companies may not rise as much as smaller companies, or larger companies may be unable to respond quickly to competitive challenges, such as changes in technology and consumer tastes.

Leverage Risk. If the Fund uses leverage through activities such as borrowing, entering into short sales, purchasing securities on margin or on a "when-issued" basis or purchasing derivative instruments in an effort to increase its returns, the Fund has the risk of magnified capital losses that occur when losses affect an asset base, enlarged by borrowings or the creation of liabilities, that exceeds the net assets of the Fund. Should the Fund employ leverage, the Fund's NAV may be more volatile

and sensitive to market movements. Leverage may involve the creation of a liability that requires the Fund to pay interest. While financial leverage has the potential to produce greater gains, it also may result in greater losses, which in some cases may cause the Fund to liquidate other portfolio investments at a loss to comply with limits on leverage and asset segregation requirements imposed by the Investment Company Act of 1940 or to meet redemption requests.

Limited History of Operations Risk: The Fund is a new ETF with a limited history of operations for investors to evaluate.

Market Risk: The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Fund's portfolio may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years, such as terrorist attacks around the world, natural disasters, social and political discord or debt crises and downgrades, among others, may result in market volatility and may have long term effects on the U.S. financial market. It is difficult to predict when similar events affecting the U.S. financial market may occur, the effects that such events may have and the duration of those effects. Any such event(s) could have a significant adverse impact on the value and risk profile of the Fund's portfolio. The current novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on the U.S. financial market. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your Fund investment. Therefore, the Fund could lose money over short periods due to short-term market movements and over longer periods during more prolonged market downturns. During a general market downturn, multiple asset classes may be negatively affected. Changes in market conditions and interest rates can have the same impact on all types of securities and instruments. In times of severe market disruptions you could lose your entire investment.

Mid Cap Securities Risk. The securities of mid cap companies generally trade in lower volumes and are generally subject to greater and less predictable price changes than the securities of larger capitalization companies.

Non-Diversified Risk. Investment companies are classified as either “diversified” or “non-diversified” under the 1940 Act. Each Fund is classified as a “non-diversified” investment company under the 1940 Act, although each is diversified for Internal Revenue Code purposes. An investment company classified as “diversified” under the 1940 Act is subject to certain limitations with respect to the value of the company’s assets invested in particular issuers. As a non-diversified investment company, the Fund is subject to the risk that it will be more volatile than a diversified fund because the Fund may invest a relatively higher proportion of its assets in a relatively smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund’s NAV and may make the Fund more volatile than more diversified funds.

Short Sales Risk. The Fund is subject to short sales risk. Short sales are transactions in which the Fund sells a security it does not own. The Fund must borrow the security to make delivery to the buyer. The Fund is then obligated to replace the security borrowed by purchasing the security at the market price at the time of replacement. The price at such time may be higher or lower than the price at which the security was sold by the Fund. If the underlying security goes down in price between the time the Fund sells the security and buys it back, the Fund will realize a gain on the transaction. Conversely, if the underlying security goes up in price during the period, the Fund will realize a loss on the transaction. Because the market price of the security sold short could increase without limit, the Fund could be subject to a theoretically unlimited loss. The risk of such price increases is the principal risk of engaging in short sales. Reinvesting proceeds received from short selling may create leverage. The use of leverage can amplify the effects of market volatility on the Fund’s share price and make the Fund’s returns more volatile. This is because leverage tends to exaggerate the effect of any increase or decrease in the value of the Fund’s portfolio securities. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. In addition, the Fund’s investment performance may suffer if the Fund is required to close out a short position earlier than it had intended. This would occur if the securities lender required the Fund to deliver the securities the Fund borrowed at the commencement of the short sale and the Fund was unable to borrow the securities from another securities lender or otherwise obtain the security by other means. Moreover, the Fund may be subject to expenses related to short sales that are not typically associated with investing in securities directly, such as costs of borrowing and margin account maintenance costs associated with the Fund’s open

short positions. These expenses negatively impact the performance of the Fund. For example, when the Fund short sells an equity security that pays a dividend, it is obligated to pay the dividend on the security it has sold. However, a dividend paid on a security sold short generally reduces the market value of the shorted security and thus, increases the Fund's unrealized gain or reduces the Fund's unrealized loss on its short sale transaction. To the extent that the dividend that the Fund is obligated to pay is greater than the return earned by the Fund on investments, the performance of the Fund will be negatively impacted. Furthermore, the Fund may be required to pay a premium or interest to the lender of the security. The foregoing types of short sale expenses are sometimes referred to as the "negative cost of carry," and will tend to cause the Fund to lose money on a short sale even in instances where the price of the underlying security sold short does not change over the duration of the short sale. The Fund is also required to segregate other assets on its books to cover its obligation to return the security to the lender which means that those other assets may not be available to meet the Fund's needs for immediate cash or other liquidity.

Small Cap and Emerging Growth Securities Risk. Small cap or emerging growth companies may have limited product lines or markets. They may be less financially secure than larger, more established companies. They may depend on a more limited management group than larger capitalized companies.

Other Risks

Operational and Cybersecurity Risk. Fund operations, including business, financial, accounting, data processing systems or other operating systems and facilities may be disrupted, disabled or damaged as a result of a number of factors, including events that are wholly or partially beyond our control. For example, there could be electrical or telecommunications outages; degradation or loss of internet or web services; natural disasters, such as earthquakes, tornadoes and hurricanes; disease pandemics; or events arising from local or larger scale political or social events, as well as terrorist acts.

The Fund is also subject to the risk of potential cyber incidents, which may include, but are not limited to, the harming of or unauthorized access to digital systems (for example, through "hacking" or infection by computer viruses or other malicious software code), denial-of-service attacks on websites, and the inadvertent or intentional release of confidential or proprietary information. Cyber incidents may, among other things, harm Fund operations, result in financial losses to the Fund and its shareholders, cause the release of confidential or highly restricted information,

and result in regulatory penalties, reputational damage, and/or increased compliance, reimbursement or other compensation costs. Fund operations that may be disrupted or halted due to a cyber incident include trading, the processing of shareholder transactions, and the calculation of the Fund's net asset value.

Issues affecting operating systems and facilities through cyber incidents, any of the scenarios described above, or other factors, may harm the Fund by affecting the Adviser, or other service providers, or issuers of securities in which the Fund invests. Although the Fund has business continuity plans and other safeguards in place, including what the Fund believes to be robust information security procedures and controls, there is no guarantee that these measures will prevent cyber incidents or prevent or ameliorate the effects of significant and widespread disruption to our physical infrastructure or operating systems. Furthermore, the Fund cannot directly control the security or other measures taken by unaffiliated service providers or the issuers of securities in which the Fund invests. Such risks at issuers of securities in which the Fund invests could result in material adverse consequences for such issuers and may cause the Fund's investment in such securities to lose value.

Securities Lending Risk. The Fund may engage in securities lending. Securities lending involves the risk that the Fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The Fund could also lose money in the event of a decline in the value of collateral provided for loaned securities or a decline in the value of any investments made with cash collateral. These events could also trigger adverse tax consequences for the Fund

Portfolio Holdings Information

The Fund's portfolio holdings will be disclosed each day on its website at www.futurefundetf.com. A description of the Fund's policies and procedures regarding the release of portfolio holdings information is available in the Fund's Statement of Additional Information ("SAI").

Management of the Fund

The Adviser

The Future Fund, LLC, located at 330 N. Wabash, Suite 2300, Chicago, IL 60611, serves as the Fund's investment adviser. The Adviser is registered with the SEC as an investment adviser under the Investment Advisers Act of 1940, as amended.

Subject to the oversight of the Board of Trustees, the Adviser is responsible for overseeing the management of the Fund's investments and providing certain administrative services and facilities under an advisory agreement between the Fund and the Adviser (the "Investment Advisory Agreement").

Pursuant to the Advisory Agreement, the Fund pays the Adviser a management fee, computed daily and paid monthly, at the annual rate of 1.00% of the Fund's average daily net assets.

Fund Expenses. The Fund is responsible for its own operating expenses. In addition to investment advisory fees, the Fund pays other expenses including costs incurred in connection with the maintenance of securities law registration, printing and mailing prospectuses and statements of additional information to shareholders, certain financial accounting services, taxes or governmental fees, custodial, transfer and shareholder servicing agent costs, expenses of outside counsel and independent accountants, preparation of shareholder reports and expenses of trustee and shareholders meetings.

Pursuant to an operating expense limitation agreement between the Adviser and the Trust on behalf of the Fund, the Adviser has agreed to reduce its management fees and/or pay expenses of the Fund to ensure that the total amount of Fund operating expenses (excluding any front-end or contingent deferred sales loads, brokerage fees and commissions, acquired fund fees and expenses, borrowing costs (such as interest and dividend expense on securities sold short), taxes and extraordinary or non-recurring expenses, including, but not limited to, litigation) do not exceed 1.24% of the Fund's average annual net assets at least until September 30, 2024. After its initial term, the expense limitation agreement is subject to annual re-approval by the Board of Trustees. The Adviser is permitted to receive reimbursement from the Fund for fees it waived and Fund expenses it paid, subject to the limitation that: (1) the reimbursement for fees and expenses will be made only if payable within three years from the date the fees and expenses were initially waived or reimbursed; and (2) the reimbursement may not be made if it would cause the expense limitation in effect at the time of the waiver or currently in effect, whichever is lower, to be exceeded. The Fund must pay its current ordinary operating expenses before the Adviser is entitled to any reimbursement of management fees and/or expenses. This Operating Expense Limitation Agreement can be terminated only by, or with the consent, of the Board of Trustees.

Portfolio Managers

Gary Black. Mr. Black serves as co-portfolio manager of the Fund and is co-managing member of the Adviser. Prior to co-founding the Adviser, Mr. Black served as Chief Executive officer of Aegon Asset Management US from June 2016 to August 2019. Mr. Black has over 30 years' experience in financial services.

David Kalis. Mr. Kalis serves as co-portfolio manager of the Fund and is co-managing member and Chief Compliance Officer of the Adviser. Prior to co-founding the Adviser, Mr. Kalis was the Managing Partner at Curvature Capital Management, a Chicago based catalyst driven equity long/short hedge fund from March 2017 to February 2021. Prior to Curvature, Mr. Kalis was Co-CIO, Head of U.S Growth Equity Strategies and a Portfolio Manager for Calamos Investments from February 2013 to February 2017. Mr. Kalis has over 30 years' experience in the investment industry.

The SAI provides additional information about the Portfolio Managers' experience, compensation, other accounts managed by the Portfolio Managers and the Portfolio Managers' ownership of securities in the Fund.

Shareholder Information

How Shares are Priced

Shares of the Fund are bought and sold at two different prices and in two different ways depending upon the type of investor as described below.

All investors including retail investors and authorized participants may buy and sell Shares in secondary market transactions through brokers at market prices and the Shares will trade at market prices.

Only authorized participants may buy and redeem Shares from the Fund directly and those transactions are effected at the Fund's NAV. Purchases and redemptions from the Funds may only occur in creation units.

The NAV of the Fund is determined at close of regular trading of the New York Stock Exchange (normally 4:00 p.m. Eastern Time) on each day the New York Stock Exchange ("NYSE") is open. NAV is computed by determining the aggregate market value of all assets of the Fund, less its liabilities, divided by the total number of shares outstanding ((assets-liabilities)/number of shares = NAV). The NYSE is closed on weekends and New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good

Friday, Memorial Day, Juneteenth, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. The NAV takes into account the expenses and fees of the Fund, including management, administration, and distribution fees, which are accrued daily. The determination of NAV for a share for a particular day is applicable to all applications for the purchase of shares, as well as all requests for the redemption of shares, received by the Fund (or an authorized broker or agent, or its authorized designee) before the close of trading on the NYSE on that day.

Generally, the Fund's securities listed on an exchange are valued each day at the last quoted sales price on each security's primary exchange. Securities traded or dealt in upon one or more securities exchanges (whether domestic or foreign) for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid ask prices on such exchanges. Securities primarily traded in the National Association of Securities Dealers' Automated Quotation System ("NASDAQ") National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. Securities that are not traded or dealt in any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity.

If market quotations are not readily available, securities will be valued at their fair market value as determined using the "fair value" procedures approved by the Board. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security may be materially different from the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. The Board has retained responsibility for all fair value determinations.. The Fund's Board with the assistance of a fair value team composed of one or more officers from each of the (i) Trust, (ii) administrator, and (iii) Advisor. The Board may also enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value. The Board reviews and ratifies the this process and fair value prices at least quarterly to assure t reliable results.

The Fund may use independent pricing services to assist in calculating the value of the Fund's securities. In addition, market prices for foreign securities are not determined at the same time of day as the NAV for the Fund. Because the Fund may invest directly or indirectly through underlying ETFs in securities primarily listed on foreign exchanges, and these exchanges may trade on weekends or other days when the underlying ETFs do not price their shares, the value of some of the Fund's portfolio securities may change on days when you may not be able to buy or sell Fund shares.

In computing the NAV, the Fund values foreign securities held by the Fund at the latest closing price on the exchange in which they are traded immediately prior to closing of the NYSE. Prices of foreign securities quoted in foreign currencies are translated into U.S. dollars at current rates. If events materially affecting the value of a security in the Fund's portfolio, particularly foreign securities, occur after the close of trading on a foreign market but before the Fund prices its shares, the security will be valued at fair value. For example, if trading in a portfolio security is halted and does not resume before the Fund calculates its NAV, the Fund may need to price the security using the Fund's fair value pricing guidelines. The determination of fair value involves subjective judgments. As a result, using fair value to price a security may result in a price materially different from the prices used by other funds to determine net asset value, or from the price that may be realized upon the actual sale of the security.

With respect to any portion of the Fund's assets that are invested in one or more open-end management investment companies registered under the 1940 Act, the Fund's net asset value is calculated based upon the net asset values of those open-end management investment companies, and the prospectuses for these companies explain the circumstances under which those companies will use fair value pricing and the effects of using fair value pricing.

How to Purchase Shares

Buying and Selling Shares in the Secondary Market

Investors may buy and sell Shares of the Fund through a broker dealer on NYSE Arca, Inc. (the "Exchange"). Shares trade under the following ticker symbol: "FFND." Shares can be bought and sold on the Exchange throughout the trading day like shares of other publicly traded companies.

Shares of the Fund may be acquired or redeemed directly from the Fund only by Authorized Participants in Creation Units or multiples thereof, in creation or redemption transactions.

You may buy and sell individual Shares of the Fund only through a broker dealer in secondary market transactions on the Exchange. There is no minimum investment required. Shares may only be purchased and sold on the secondary market when the Exchange is open for trading. The Exchange is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

Creation and Redemption Transactions

Authorized Participants may acquire Shares directly from the Fund, and Authorized Participants may tender their Shares for redemption directly to the Fund, at NAV per Share only in large blocks, or Creation Units, of 20,000 Shares for the Fund.

The Fund issues and redeems Shares at NAV only in large blocks of 20,000 Shares (each block of Shares is called a "Creation Unit") to Authorized Participants that have entered into agreements with the Fund's distributor. Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Purchases and redemptions directly with the Fund must follow the Fund's procedures, which are described in the SAI.

Premium/Discount Information

Investors who buy and sell Shares in secondary market transactions through brokers purchase and sell such Shares at market prices. The market price of Shares may be greater than, equal to, or less than the Fund's NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of Shares.

Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares and is recognized as the owner of all Shares for all purposes.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or “street name” form.

Frequent Purchases and Redemptions of Fund Shares

The Board has not adopted a policy of monitoring for other frequent trading activity because shares of the Fund are listed for trading on a national securities exchange.

Distributions and Taxes

Dividends, Distributions and Taxes

Shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis and are created and redeemed in-kind and/or for cash in Creation Units at each day’s next calculated NAV. In-kind arrangements are designed to protect ongoing shareholders from the adverse effects on the Fund’s portfolio that could arise from frequent cash redemption transactions. In a mutual fund, redemptions can have an adverse tax impact on taxable shareholders if the mutual fund needs to sell portfolio securities to obtain cash to meet net fund redemptions. These sales may generate taxable gains for the ongoing shareholders of the mutual fund, whereas the Shares’ in-kind redemption mechanism generally will not lead to a tax event for the Fund or its ongoing shareholders.

Ordinarily, dividends from net investment income, if any, are declared and paid quarterly by the Fund. The Fund will distribute its net realized capital gains, if any, to shareholders annually. The Fund may also pay a special distribution at the end of a calendar year to comply with federal tax requirements.

No dividend reinvestment service is provided by the Fund. Broker-dealers may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of the Fund for reinvestment of their dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole shares of the Fund purchased in the secondary market.

Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

Taxes

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- o The Fund make distributions,
- o You sell your Shares listed on the Exchange, and
- o You purchase or redeem Creation Units.

Taxes on Distributions

Distributions from the Fund's net investment income, including net short-term capital gains, if any, are taxable to you as ordinary income, except that the Fund's dividends attributable to its "qualified dividend income" (i.e., dividends received on stock of most domestic and certain foreign corporations with respect to which the Fund satisfies certain holding period and other restrictions), if any, generally are subject to federal income tax for non-corporate shareholders who satisfy those restrictions with respect to their Shares at the rate for net capital gain. A part of the Fund's dividends also may be eligible for the dividends-received deduction allowed to corporations -- the eligible portion may not exceed the aggregate dividends the Fund receives from domestic corporations subject to federal income tax (excluding REITs) and excludes dividends from foreign corporations -- subject to similar restrictions. However, dividends a

corporate shareholder deducts pursuant to that deduction are subject indirectly to the federal alternative minimum tax.

In general, your distributions are subject to federal income tax when they are paid, whether you take them in cash or reinvest them in the Fund (if that option is available). Distributions reinvested in additional Shares through the means of a dividend reinvestment service, if available, will be taxable to shareholders acquiring the additional Shares to the same extent as if such distributions had been received in cash. Distributions of net long-term capital gains, if any, in excess of net short-term capital losses are taxable as long-term capital gains, regardless of how long you have held the Shares.

Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in the Shares and as capital gain thereafter. A distribution will reduce the Fund's NAV per Share and may be taxable to you as ordinary income or capital gain (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.

Taxes on Exchange-Listed Share Sales

Any capital gain or loss realized upon a sale of Shares is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less. The ability to deduct capital losses from sales of Shares may be limited.

Taxes on Purchase and Redemption of Creation Units

An authorized participant that exchanges securities for Creation Units generally will recognize a gain or a loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the securities surrendered plus any Cash Component it pays. An authorized participant that exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received plus any cash equal to the difference between the NAV of the Shares being redeemed and the value of the securities. The Internal Revenue Service (the "Service"), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales" or for other reasons. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less.

If an Authorized Participant purchases or redeems Creation Units, the authorized participant will be sent a confirmation statement showing how many Shares the authorized participant purchased or sold and at what price. See "Tax Status" in the SAI for a description of the newly effective requirement regarding basis determination methods applicable to Share redemptions and the Fund's obligation to report basis information to the Service.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the Shares under all applicable tax laws. See "Tax Status" in the SAI for more information.

FUND SERVICE PROVIDERS

Ultimus Fund Solutions, LLC is the Fund's administrator and fund accountant. It has its principal office at 4221 North 203rd Street, Suite 100, Elkhorn, Nebraska 68022-3474, and is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds and exchange-traded funds.

Brown Brothers Harriman & Co., located at 50 Post Office Square, Boston, Massachusetts, 02110-1548 is the Fund's transfer agent and custodian.

Northern Lights Distributors, LLC located at 4221 North 203rd Street, Suite 100, Elkhorn, Nebraska 68022-3474 is the distributor for the shares of the Fund. The Distributor is a registered broker-dealer and member of the Financial Industry Regulatory Authority, Inc. ("FINRA").

Alston & Bird LLP, 950 F St. NW, Washington, DC 20004, serves as legal counsel to the Trust.

Cohen & Company, Ltd. 1350 Euclid Avenue, Suite 800, Cleveland, OH 44115, serves as the Fund's independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

OTHER INFORMATION

Continuous Offering

The method by which Creation Units of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of Shares are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act of 1933, as amended (the “Securities Act”), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares and sells the Shares directly to customers or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in Shares, whether or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

Dealers effecting transactions in the Shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Financial Highlights

Because the Fund has only recently commenced investment operations, no financial highlights are available for the Fund at this time. In the future, financial highlights will be presented in this section of the Prospectus.
